Patient Sticker

Transfer Triage Scoring (TTS)

Date: _____

Patient Acuity Risk

Respiratory Rate	(Circle)
12-20 (Normal)	0
20-25 (Elevated-Adequate)	1
Maintained by Ventilator or BVM	3
< 12 or > 35 or Irregular (Inadequate)	5
Hemodynamics	
MAP Trending > 70	0
Vasopressors are stabilizing MAP	2
MAP Trending < 70	4
Arrythmias	
No Arrhythmia	0
Present, but not life-threatening	1
Life-Threatening or STEMI	3
Glasgow Coma Score (GCS)	
15	0
8-14	2
<8 or neurological compromise	4
Trauma Criteria	
No Trauma Criteria	0
Level II Trauma	2
Level I Trauma	4
OB/GYN (if applicable)	
Needing evaluation only	0
Active labor - no complications	1
HTN/preeclampsia	2
Premature rupture of membranes	3
Active labor - complications present	4
Active preterm labor (< 35 weeks)	5
Patient Acuity Risk Total[1] *(Add all above scores)*	

Support & Monitoring Risk

EKG Necessity	(Circle)
No Monitoring	0
ALS Preference, but not required	1
Monitoring ordered/required	2
IV/IO Access & Maintenance	
Not Required or NS Lock Only	0
Maintain NS or LR Drip	1
1-2 Medications is ordered/possible (bolus/drip)	2
More than 2 medications ordered/possible	3
Electrical Therapy	
Not Anticipated	0
Pacing may be required	1
Active pacing in progress	2
Unstable arrhythmia - cardioversion/defib possible	3
Airway/Breathing Support	
No airway/breathing support needed	0
Oxygen only	1
CPAP or BiPAP	2
Ventilator, RSI, monitor chest decompression	3
Pharmacological Intervention[2]	
None Required	0
Class I medication required/possible	1
More than 1 Class I medication required/possible	2
Class II medication required/possible	3
Surgical & Heart Cath Intervention	
None suspected or known	0
Inevitable, but likely delayed	1
Inevitable and immediate (admit to ER/Cath Lab)	2
Support & Monitoring Risk Total *(Add all above scores)*	

Patient Acuity Risk:

- Acuity 0 indicates the patient is stable- all findings within normal limits
- Acuity 1-5 indicates the patient is stable, but has the potential to go unstable
- Acuity >5 indicates the patient is unstable

Pharmacological Interventions

- Class I Drug: Inotropes, vasodilators, antiarrhythmics, bicarbonates, analgesics, benzodiazepines, antibiotics, potassium, magnesium, steroids, beta-blockers, thrombolytics, nitrates.
- Class II Drug: Sedatives, paralytics, blood products, TXA, uterine relaxants.

Transport Triage Score:

- Total Risk 0-3 is non-emergent
- Total Risk 4-15 is emergent determinant
- Total Risk >15 is emergent/critical determinant

The following interventions require a paramedic:

- RSI
- Cardioversion/Pacing
- Heparin
- Blood products
- Vasopressors
- ETT management
- Needle decompression
